## Instant Overview of Potential Risks

Keep an eye on your machine health

Powerful sensors watch everything you can't see to detect potential machine breakdowns.

Machines in need of attention are ranked in terms of severity to help technicians know what to focus on first. This way, you can pro-actively prevent breakdowns and avoid unforeseen costs.

## Your Machine's Story

Events, Live View and History

Every event, such as CAN fault codes, pre-checks, damage reports, and even overrun services are listed in terms of importance so the service technician knows the exact source of a breakdown.

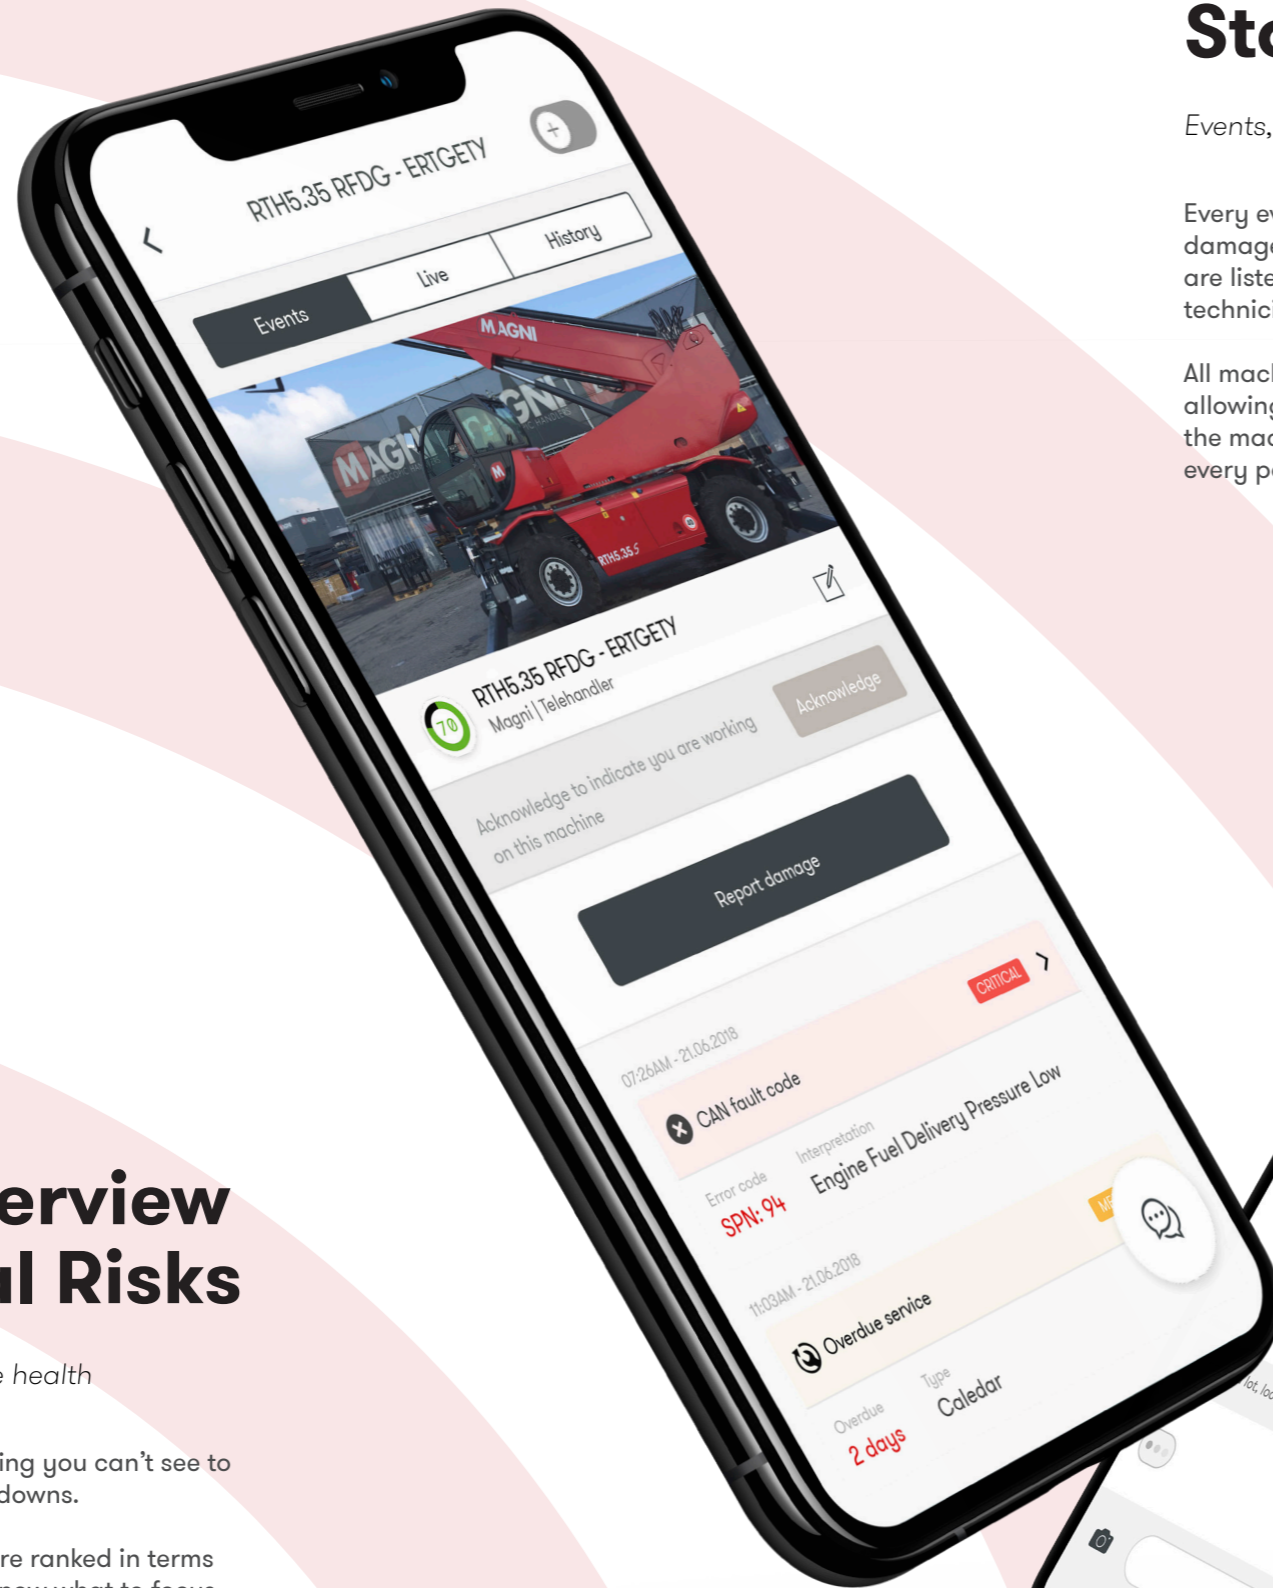

All machine events for each machine are logged allowing you to easily go back in time and recount the machine's history. The graphical overview shows every past issue and action.

## Follow, and Get Notified

Watch over specific machines

A control center for each machine right in the palm of your hand. Explore details and view recommendations to solve problems. Follow any machine for everything you need to know and a way to get things done.

All kinds of incidents trigger a notification allowing you to get a jump start on fixing the problem. Simply chat with the machine operator, service technician and site manager and get started.

Did you know...

The Damage Reporting tool in MyMagni Mobile enables technicians to quickly log machine damages or issues.
